Unmet Requirements:

-

Questions:

-

Notes:

- You might consider how your layout functions when opened on the iPad Pro, which has a different resolution (I forgot about the iPad Pro when you asked about screen sizes in class a while back).
- For the sake of modularity and potentially simpler code, you might consider breaking your main screen into two different view controllers, one for interacting with the content of your SYNSET and one for interacting with the content of your SEQSET. It would be fairly trivial to create a container view controller to place them where you wanted if you did this (and potentially allow this to be customizable).
- Your RATE button is missing in your portrait design. Not sure if this is intentional or not.
